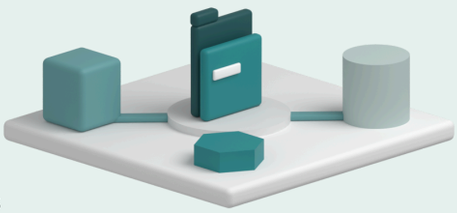
Generation Impact Global

QB-EDGE™

ESG data goes in raw. KPIs come out defensible.



QB-EDGE™ is ESG data collection and questionnaire software for teams that send questionnaires to portfolio companies, suppliers or borrowers and collect the answers.

VitAI™ prepares, rules decide, people approve.

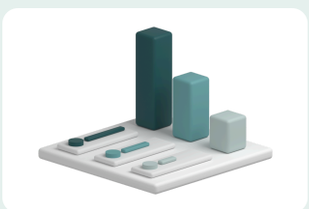
16
question types

150
questions per VitAI™ run, at most

5
frameworks you can map to

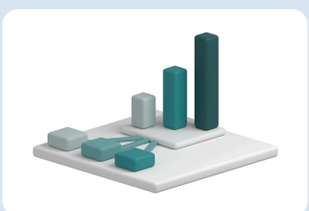
9
condition operators

How the work is shared



VitAI™ prepares

- Copies a questionnaire you already have: PDF, Word, Excel or CSV.
- Drafts up to 150 questions from your instruction, with the cost shown first.
- Drafts answers from a respondent's documents, each beside its source passage.



Rules decide

- Weights per answer option turn answers into scores.
- A Benchmark across your own panel, with no outside market data.
- Show/hide conditions, and KPI formulas over the current and previous period.

People approve

- A drafted answer is saved only when the respondent applies it.
- Flag questions, add a note, then approve or reject each submission.
- A history log lists each submission, approval and rejection.

How it works

1. **Create templates**
   Write the questions or let VitAI™ draft them.
2. **Build KPI logic**
   Formulas, units and answer weights.
3. **Distribute**
   Once or on a schedule, with deadlines and reminders.
4. **Collect**
   Track the status of each respondent.
5. **Review**
   Ask for corrections, approve or reject.
6. **Analyse**
   Scores, KPIs and tables. Export to Excel.

Frameworks

Import GRI and ESRS disclosures as ready-made questions. Map your questions to GRI, ESRS, SASB, SFDR and VSME.

Who it is for

Fund managers and private equity, corporates with suppliers and business units, banks and financial institutions, award and rating organisers.
